

Harmonizing The Gulf: Our Vision and Mission

Building a Community to Heal the Gulf of Mexico

Harmonizing The Gulf is a privately funded project building support through sponsorships and donations to bio-energetically revitalize the Gulf of Mexico. This project is an outgrowth of the **Harmonizing New Orleans Project** facilitated by Living Design Consultants and funded by private citizens of New Orleans in 2009.

The intention of this initiative is to support the environmental restoration of the Gulf of Mexico using a new science for earth healing.

This **new science** which incorporates proven vibrational technology, bio-energetic tools, and the principles of BioGeometry™, is designed to revitalize all natural life forms including the air, water and earth itself. Leadership for this endeavor is provided by Living Design Consultants which is supported by DONATIONS and EXPERTISE from a growing core group of people committed to the use of this new science and these alternative technologies. Currently, the project encompasses the waters and coastal areas of the Gulf of Mexico from Louisiana to Florida.

Harmonizing the gulf appreciates that many people are hard at work doing what they can to physically remove the oil from the water and the coastline. We also acknowledge and value all of the prayers that have been said and continue to be offered for the restoration and healing of our planet and specifically the Gulf.

Harmonizing the Gulf intends to compliment what is already underway by providing a unique and vital service focusing on the restoration and rejuvenation of the life supporting subtle energy qualities of the water and the earth.

Scientific research goes beyond the chemical composition and reveals that water is a programmable crystal with Memory. Many international scientists have research documenting that water takes on the characteristics of what it has been exposed to. Even though it can be chemically clean, water can be devoid of life force due to changes in the molecular structure even after the toxins have been removed. Dr. Masuro Emoto's research shows the dramatic effects of water's memory when tiny amounts are frozen into crystals and photographed under a microscope. Water with toxic memory is devoid of life force and freezes into unbalanced, amorphous shapes. Pristine and bio-energetically reprogrammed water freezes into beautiful, intricate and balanced hexagonal snowflake shaped crystals.

The **Harmonizing the Gulf** project initiates reprogramming and transforming the structure of the water to its natural state; full of life force and optimal vitality. As this is done, the molecular structure of the water becomes intricate, beneficial and life-supporting.

Phase One funding for 24 specifically designed air resonators and 239 water chargers to be strategically placed on land and in the Gulf from Port Arthur, Texas to Biloxi, Mississippi is partially in place. Partial contributions of boats and fuel are also in place but more are needed. Work begins during the 3rd week of September 2010.

This project is designed to address a four state region as funding allows. The number of phases needed will be determined by testing over time. **We are seeking Sponsorship for Air Resonators and Water Chargers. Donations of any amount are also being accepted.** Team leaders for each state are needed to facilitate completing all phases of this project. As you choose to contribute, rest assured, your donation and or time will be used efficiently and effectively. Materials for the devices we are using and building are being provided by the manufacturer at a reduced cost in order to help minimize overhead. The organization and testing is also being done at minimal cost. Donations of boats, fuel and labor are welcome.

Testing reveals that a total of 239 Water Chargers costing \$175.00 ea. and 24 Air Resonators costing \$450.00 ea. are needed to start the process of make a difference. Our goal is to complete Phase One by the beginning of November. All funding will go to supply the Louisiana, Mississippi, Alabama and Florida coastline with Air Resonators and Water Chargers as funding allows.
